

Extendable & Customizable Order-to-Cash

How the Axsy mobile app gives you complete control over your company's order-to-cash experience

No two businesses are completely alike. Even within one company, it's common for different departments, teams and sites to have their own unique structures, processes and ways-of-working. This makes it extremely difficult to find enterprise mobile apps that can meet the needs of all your users. As a result, business may be required to invest in multiple apps, each practical to only a specific set of users.

Compounding the costs and complexity of managing several apps is the common requirement to develop bespoke features on top of these apps, work which can take a lot of time and money. Some of this burden can be eased by web based or hybrid apps, but such apps are typically tethered to internet connectivity with many features being disabled – or the app not working at all – once the user loses their data connection.

Axsy: The Only App You Need to Sell Mobile

Axsy's mobile app helps solve these problems while helping workers in the field complete the order-to-cash process with their customers. Understanding that a field sales rep has different needs than a field service technician, or that an in-house employee requires different information access compared to a contractor or franchisee, the Axsy mobile app was designed to be adaptable to multiple scenarios. What this means is that you can deploy a single app to ALL your users.

With Axsy, your order-to-cash experience can be extended and customized for each particular type of user. This is all done through a combination of straightforward role-based configuration and downloadable features – developed with common web technologies such as HTML5 and JavaScript – which work even when a user is offline.

Common Challenges with Enterprise Mobile Apps:

-  Multiple apps to manage with different apps for different users
-  Bespoke features are expensive and take too long to deploy
-  Majority of functionality requires internet connectivity

Axsy Mobile App Benefits:

-  A single off-the-shelf app for all your users
-  Customizable by user role
-  Extendable via common web technologies
-  Works offline

Deploy Once

Axsy provides a single off-the-shelf app for all your users, making it fast to deploy and easy to manage. This removes the need, and associated costs, of maintaining multiple apps for multiple users across multiple data silos.

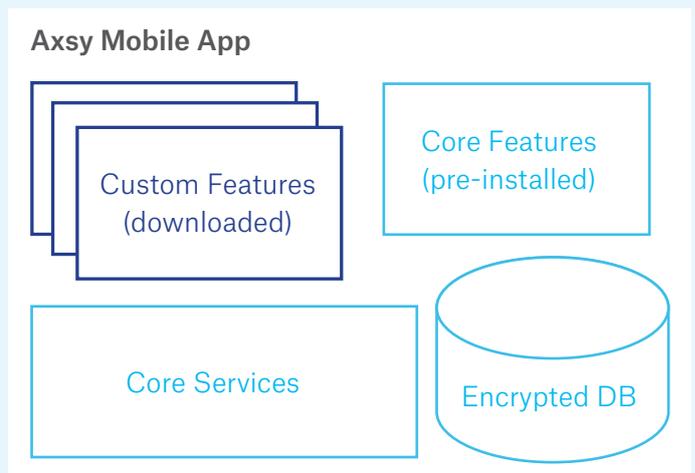

Extend Easily

The Axsy mobile app can be easily extended via custom features developed with common web technologies such as HTML5 and JavaScript. These features are downloadable to the app without the need for a complete app upgrade. And, just as with the core Axsy functionality, access to these custom features is controlled via our permissions model and do not require a persistent internet connection to work.

This architecture simplifies deployment of new functionality and eliminates the typical time and cost associated with bespoke development of new business logic.

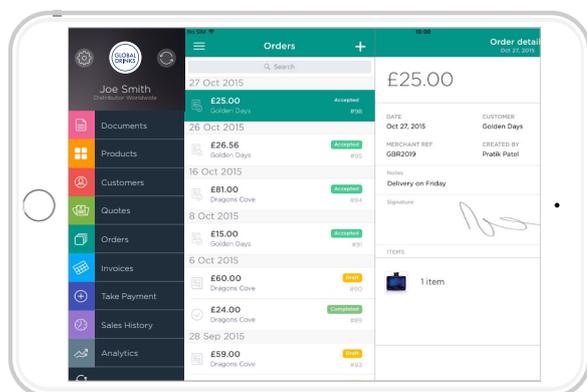

Control Access

Our solution is backed by a sophisticated role-based permissions model, allowing fine-grained control over which users gets access to specific features and data. Configuration is simple and straightforward via our easy-to-use self-serve web portal.

Works Offline

Since internet access is never a given when you're on the road, the Axsy app works completely offline so you can view and edit your data – as well as access any downloaded custom features – wherever you are, providing your field teams with a reliable tool when dealing with customers.

Sell More, Sell Better

Of course, all this customizability builds upon Axsy's core order-to-cash solution which helps you process orders & payments in real-time while in the field, eliminating paperwork, slashing customer care calls and making your customer visits more efficient.
